No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                           The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any sequence is human rGAL-12 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                             The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents DNA encoding a human alphagalactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LeuValSerTrpAspIleProGlyAlaArgAlaLeuAspAsnGlyLeuAlaArgThrPro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-12R, r-GAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Fabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-12 DNA used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alphatinvention relates to glucocerebrosidase (GCB, GCR) and alphatian expression system. The inventional modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-pick disease, Pabry's disease and Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocrebrosidase (GCB, GCR) and alphagalactosidase (Gal) enzymes having a post-tranablational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Pabry's disease, Tay-Sachs disease, Hurler's syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substracts for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any sequence is human rGAL-8 DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes of an be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents DNA encoding a human alphagalactosidase derivative polypeptide of the invention.

The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polymucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Fabry's disease and Gaucher's diseases. The present sequence is human GAL DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CTCGTTTCCTGGGACATCCCTGGGGCTAGAGCACGACGATGGCATGGCAAGGACGCCT 120
                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-12R, r-GAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Rabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-8 DNA used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AlaAsnTyrValHisSerLysGlyLeuLysLeuGlyIleTyrAlaAspValGlyAsnLys 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GATTCAGAAGGCAGACTTCAGGCAGACCTCAGCGCTTTCCTCATGGGATTCGCCAGCTA 360
                                                                                                                                                                                                                                                                                                                                              The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alphagalactosidase enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's Blasease, Niemann-Pick disease, Fabry's disease and Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 ATGCAGCTGAGGAACCCAGAACTACATCTGGGCTGCGCGCTTGCGCTTGCGTTCCTGGCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-glalatocidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Nieman-Pick disease, Rabry's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LeuvalSerTrpAspIleProGlyAlaArgAlaLeuAspAsnGlyLeuAlaArgThrPro

```
The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any commercial process that involves substrate hydrolysis. The present
                                                                                                                                                                                                                                                                                        treating lysosomal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide for producing active recombinant human and animal
lysosomal enzymes in a plant expression system that can be used in enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents DNA encoding a human alphagalactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ThrMetGlyTrpLeuHisTrpGluArgPheMetCysAsnLeuAspCysGlnGluGluPro

The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Pabry's disease and Gaucher's diseases. The present sequence is human GAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New lysosomal enzymes, useful in treating human and animal lysosomal storage diseases, e.g. Fabry's disease and Gaucher's diseases.

The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-12R, r-GAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Rabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-12R DNA. This sequence comprises a human rGAL-12 DNA and ER retention signal DNA. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GATTCCTGCATCAGTGAGAAGCTCTTCATGGAGATGGCAGAGCTCATGGTCTCAGAAGGC 240

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics.

This ORF clone has been cloned with normalized stop-codon. The CDS has been directionally cloned with normalized stop-codon. The CDS has been the Sall and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence. Each clone is clonally isolated and full-length sequence. Each clone is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Synthetic construct Homo sapiens clone FLH025769.01X galactosidase alpha (GLA) mRNA, complete cds.

Alpha-galactosidase A.

Nucleophile (By similarity).

Substrate binding (By similarity).

N-linked (GlCNAc. . .) (By similarity).

N-linked (GlCNAc. . .) (By similarity).

N-linked (GlCNAc. . .) (By similarity).

By similarity.

                                                                                                                                                                           and mouse cDNA sequences.",
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- CATALYTIC ACTIVITY: Hydrolise of terminal, non-reducing alpha-D-galactose residues in alpha-D-galactosides, including galactose oligosaccharides, galactomannans and galactohydrolase.
-!- SUBUNIT: Homodimer.
-!- SUBCELLULAR LOCATION: Lysosomal.
-!- SIMILARITY: Belongs to the glycosyl hydrolase 27 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;
